                                                                                                                                                                                                                  pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic search, using sw model

/laboratory Mouse DNA Resources/documents/dnares/). The Sheared DNA
was hydrodynamically sheared by repeated passage through a
(http://www.jax.org/resources/documents/dnares/ and T4
0.005 inch orifice at constant velocity. The sheared bNA
was blunt end-repaired with T4 bn polymerase and T4
vas blunt end-right molar excess The 5
polymuclootide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess The 5
electrophoresis vector DNA was prepared from a derivative
electrophoresis vector DNA was prepared from a derivative
of phapa (gil4732114) ghar12972.1), a copy-number
electrophoresis vector DNA was prepared the daptors and
inducible derivative of plasmid R1. The vector was ligated
of purified. The sheared, adaptored mouse DNA was annealed to
with adaptors complementary to the insert adaptors and
of purified. The sheared, and transformed into
purified vector DNA, and transformed into
adaptored vector DNA, and transformed into
chemically-competent E. coli X110-Gold (Stratagene) cells
and selected for ampiciliin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Similarity

Laboratory Mouse DNA RESOURCE (Accuments/dnares/). The DNA (http://www.jax.org/resources/documents/dnares). The DNA (http://www.jax.org/resources/documents/dnares) through a (http://www.jax.org/resources/documents/dnares) through a was hydrodynamically sheared by repeated passage through a (0.05 inch orifice at constant velocity. The sheared DNA (0.05 inch orifice at constant velocity. The sheared and size-selected for a 9.5 to ligated to the blunt ends in high molar excess. The polynucleotide kinase. Adaptor oligonucleotides were adaptored DNA was purified and size-selected for a 9.5 to 119ated to the blunt ends in high melar excess. The 10.5 kb range using preparative agarces gel adaptored using preparative agarces gel adaptored as sing preparative agarces for was ligated of pwDA2 (gil4732114|gb)AF129072.1), a copy-number lettrophoresis. Vector DNA was prepared from an inducible derivative of plasmid R1. The vector was and inducible derivative of plasmid R1. The vector was annealed to with adaptors complementary to the insert adaptors and with adaptors complementary to the insert adaptors and adaptored vector DNA, and transformed into purified. The sheared, adaptored mouse DNA was annealed to chemically-completent E. Looli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          USA

Determination of this BAC-end sequence was carried out as part of a petermination of the Barkeley Drosophila Genome project (BDGP).

Determination of the Barkeley Drosophila Genome project (BDGP).

Collaboration with the Barkeley Drosophila Genome project (BDGP).

The BDGP is constructing a physical map of further information melanogaster genome using these BGCs. For further prosophila melanogaster BGC library was preparable by Kazurtoyo Gooegaat and please see http://www.fruitfly.org The BDGP Drosophila please see http://www.fruitfly.org The BDGP Drosophila part of the BDGP from the cancer and the Roswell Park Cancer Institute in Buffalo, melanogaster in pieter de Jong's laboratory in the pepartment of cancer Genetics at the Roswell Park Cancer Institute in BDGP from the Cancer Genetics in amed RogC198 and was constructed by partial NY. The library is named to DNA provided by the BDGP from the BDGP is not be pland EST libraries. A more detailed description of the library or isogenic strain y2; on bw SP, detailed description of the library or pland EST libraries. A more detailed description of the library or and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           987 bp DNA linear GSS 03-JUN-1999
Drosophila melanogaster genome survey sequence TET3 end of BAC #
Drosophila melanogaster from Drosophila melanogaster (fruit BACR09C16 of RPCI-98 library from Drosophila melanogaster (fruit 1), genomic survey sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        318 ACATAGGAGACAGGAATAAGTGAAGGAGAGAAGGGAGGACATTGGAGCACCCAAGGAGAG 377

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            USA
           (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwDd2 (gil4732114 lgblAF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers
